(54) Title: METHOD AND APPARATUS FOR PACKAGING AND TRANSMITTING DATA

(57) Abstract: A system and method for communicating a package of information. The system comprises a machine readable medium having information packaging software that generates a computer executable file (Fig 1, 14) comprising a package of information. The packet information comprises the file of data and encryption software. The system communicates the package of information over a network (Fig 1, 16) that is in communication with a machine readable medium. A client computer system (Fig 1, 17) in communication with the network is adapted to receive the package of information and execute the computer executable file. The computer system has a client permissions database (Fig 1, 20) and a vault adapted to receive the package of information.
